

DESCRIPTION

A NEW fully comprehensive range of heavy duty weatherproof cable, termination and junction boxes for trackside applications.

The IP66 316L stainless steel enclosures are manufactured with a high level of functionality, protect against corrosion, dust and harsh weather conditions and are designed to withstand rigorous trackside applications.

With over 200 variant sizes available, this extensive range can be supplied off the shelf for a quick turnaround with terminals and holes pre-drilled for cable entries, all according to the individual customer specification. The small box range is ideal for rail points heating, hot and cold probe termination.

KEY FEATURES

- One-piece polyurethane gasket
- Removable hinged door
- Earth studs
- Optional padlock hasp
- Bespoke sizes and designs are available upon request
